Sales Agents for genuine high grade rust resisting "Nico Metal" Products.

Northfield Batch Mixers.

Built in two styles: (1) The Slush Mixer for mixing slush concrete and mortar (capacity 30 to 60 cu. yds. per day), especially adapted to all kinds of contract work where slush mixtures are used and where enormous capacity is desired; they are fine on highway bridge work and general building contract work. (2) The Dry-or-Wet Mixer is for either dry or semiwet work or for slush mixtures (capacity about half that of the slush mixer); fine for brick or block work, tamped sidewalk or curbing, and also for slush work. Both styles are alike except in the mixing device, which is over twice as rapid in the slush mixer. Substantial and light; two men can carry them. Turning on the crank is easier work than shoveling or wheel-

NORTHFIELD BATCH MIXER
Operated by hand or power

MORTAR PAIL
Galvanized steel, built for hard usage; holds $\frac{1}{2}$ bushel or 16 quarts; every contractor needs $\frac{1}{2}$ doz. in each outfit. Price, \$24.00 per doz.

ing into them. Can always be set to discharge direct into forms. A $1\frac{1}{2}$ -h.p. pump engine will run them. Simple and rapid, they give a most thorough mixture. No outfit is complete without one or more.

Northfield Combination Gravel Screeners and Washers.

They wash, screen and grade the sand and gravel, all in one operation. Very little water is needed, as the water used passes through a straining and settling apparatus and is used over and over. Very moderate in price. Any small contractor can afford one. Light in weight. Substantially built. The portable type can be taken right out on any small job or used at any gravel pit; daily capacity from 50 to 100 cu. yds; thoroughly washes and properly grades the aggregate. Engineers and architects need no longer hesitate about specifying washed and graded aggregate. This machine puts the facility within reach of all.

Northfield Combination Sand and Water Heaters.

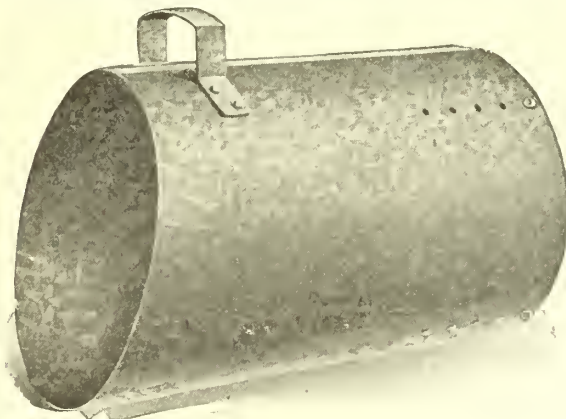

They heat a continuous flow of sand and gravel through hot water grates and at same time supply all hot water necessary for largest concrete jobs. Simple, economical, light, efficient. Contractors who have this heater need have no dread for severest winter weather.

Catalogues and Further Particulars.

Sent on request. Specify the lines you are interested in.

GALVANIZED STEEL MORTAR BOX
Three sizes: 7, 8 and 11 ft. long. Used for heating water and many other purposes. Lighter than wood, they will outlast a dozen wooden boxes. A good investment for all contractors

ADJUSTABLE CEMENT MEASURING SCOOP
Cement is first dumped into a box and thence correct proportion is measured quickly by scoop and put in mixer. A time saver; adjustable, strong, light and handy. Price, \$1.00 each
